

Asus USB-N53

The ASUS USB-N53 is a dual-band USB adapter that provides flexible dual-band connection for lag-free streaming and high performance networking. It also has a superior antenna design for extensive wireless coverage. With the bundled USB cable, you can flexibly adjust the antenna to receive the strongest signal. A friendly user interface utility allows you to install and use the application easily, making the USB-N53 a fantastic router both at home and on the road.

Flexible Dual-band Connection

Wireless-N dual-band internet application for lag-free, high definition streaming.

Power Signal Transmission

Superior antenna design for extensive wireless coverage- an increase of more than 150%.

Enhanced Reception

With the USB cable accessory, you can flexibly adjust the antenna to receive the strongest signal.

DIR-657 HD Media Router 1000

Up to 300 Mbps speed, 4 Gigabit Ethernet ports and HD Fuel bandwidth prioritization combine to optimize your online entertainment for seamless HD video streams, high-performance gaming, and VOIP calls without annoying glitches or lags. There's a Shareport USB to allow for device printing, an SD Card slot for accessing HD media files and with DLNA, the HD Media Router can connect to virtually any device. The HD Media Router 1000 has been designed to keep up with your connected lifestyle and deliver the uninterrupted connectivity you need to power multiple devices, simultaneously, and keep you in command of your digital universe.

Features:

- Up to 300 Mbps data transfer rates
- HD Fuel™ QoS to prioritize high-bandwidth applications
- High bandwidth Gigabit ports for performance devices
- SharePort™ Plus Technology for sharing USB 2.0 devices

H.264 Megapixel Surveillance Camera TL-SC3430

What This Product Does

With its built-in high performance 1.3Mega-Pixel sensor, the TL-SC3430 is excellent for homes, shops, banks, offices and other building surveillance where clearer video and more image detail are required. What is more exciting is that wherever users are, high definition video can be delivered to them with the most fluidity, through a standard web browser or 3G device so that users will be to stay close to what they care for most.

With simple installation, event alerts, 2-way audio and other practical functions, the TL-SC3430 is a perfect solution for the advanced viewer with attention to detail.

1.3 Megapixel HD Video for Identification Surveillance

Equipped with high performance 1.3Mega-Pixel sensor, it can provide HD images that are more useful, with more image detail and with wider scope for identification, such as faces of people or a car's license plate.

Advanced H.264 Codec Delivers Beautifully Smooth Video

H.264 is an advanced video compression technology that greatly reduces the size of a digital video file (up to 80%) without compromising video quality compared with video quantity. Using H.264 provides savings in network bandwidth and storage costs, as well as achieves much higher video quality for a given bit rate.

Intelligent Surveillance Functionality

Motion detection settings make the camera record automatically and alert you via an e-mail when motion is detected.

Multiple Easy Remote Viewing Options

TP-LINK's TL-SC3430 is compliant with 3GPP protocols, so users can look in on their cameras from 3G mobile Phones, laptops or tablets, such as Android [™] phones or 3G enabled iPads [™].

16-channel Management Software

The TL-SC3430's bundled surveillance software assists users with managing multiple cameras at the same time. With it, video from 16 cameras can be displayed on one screen. Users can archive streamed video and audio straight to their hard drives, playback video, and monitor up to 16 cameras on a single screen.

2-Way Audio Communication

With the TL-SC3430's built-in microphone or one purchased separately, users can hear what's happening within range of their cameras remotely. What's more, by connecting an external speaker to the TL-SC3430, users may also speak to someone near the camera or give a public address depending on the speaker's strength. This brings users more convenience allowing for better communication when monitoring their cameras from a remote location.

Easy Remote Access-DDNS & UPnP

Eliminating the need for users to remember a numeric IP address, the TL-SC3430's DDNS feature enables users to remotely access the camera by typing an easy-to-remember domain name (e.g. www.mycamera.com) into their browser. This feature comes in handy, especially when the camera's IP address is always changed by users' Internet Service Providers. Even more convenient is if the camera is connected with a router and set up in a local area network, the router's UPnP function can facilitate access to the camera without any complicated configuration of the router or camera.

RT-N66U Dual-Band Wireless-N900 Gigabit Router

Incredible Performance with Incredible Control

The ASUS RT-N66U dual-band wireless-N900 gigabit router delivers incredible performance and coverage range. With new ASUSWRT UI, quickly setup your network, customize user access, and monitor signal strength. Following the award-winning RT-N56U, the RT-N66U increases Wi-Fi speed for both 5 GHz and 2.4 GHz transmission by 50% up to 900Mbps that makes it ideal for bandwidth demanding tasks such as 3D HD video steaming, multiplayer gaming, USB hard drive file sharing, and USB connected printer sharing. Built-in Wi-Fi amplifiers make the RT-N66U the perfect wireless router for larger, multi-level homes and buildings with signal range that reaches virtually any area.

Whether you're a tech-savvy enthusiast or a first-time user, the RT-N66U is exceptional easy to use with CD-free, Quick Installation Setup (QIS) that lets you plug-n-surf right out of the box and connect PCs, smartphones, tablets, and other wireless devices quickly. Thanks to its refined interface tools, you get control like never before, letting you monitor signal strength, setup parental settings, and other useful functions in a robust yet intuitive way.

Designed for Class-Leading Speed and Range

Designed with the latest in networking technology, the RT-N66U delivers exceptionally fast wired and wireless connectivity. What's more, it comes with a powerful detachable Wi-Fi antenna to further extend wireless range.

Dual-Band Connectivity for Lag-Free Entertainment

Delivering both 2.4 GHz and 5 GHz concurrent bands up to 450Mbps and 450Mbps respectively, the RT-N66U has a total speed of up to 900Mbps connectivity to provide speed with stability. Perform basic internet tasks like Web browsing and file downloading under the 2.4 GHz band, while also simultaneously streaming 3D HD content and other demanding applications smoothly on the 5 GHz band.

Optimized and Reliable Wireless Coverage via Ai Radar

ASUS Ai Radar intelligently strengthens connections to wireless devices. With high-powered amplification and beam package, it provides optimized signals in any direction with better coverage to improve data throughput.

Easy Setup Through Your Tablet, Smartphone, or PC

With the RT-N66U, setup is simple. Simply power and connect the router and then open a browser on a Wi-Fi-enabled device like a laptop or tablet. You will be taken to a setup page with a prompt to enter the ID/password from your Internet provider and that's it! Now setting up your network is easier than ever.

Powerful functions, easiest management

With the ASUSWRT Dashboard UI, setup, monitor, and control network applications all in one intuitive area. The whole new dashboard interface lets you manage all clients and settings on a single graphical interface and provides 1-click updates.

Optimize Your Network for You

Do you game a lot, or spend most of your time streaming videos? Whatever your planned use is, the RT-N66U has a Quality of Service (QoS) that lets you select how much bandwidth is prioritized for virtually any task. Plus, the traffic monitor allows you to check your Web usage in a clear and graphical interface.

Two Multi-Functional Built-in USB ports

Featuring connectivity to devices, FTPs, SAMBA, UPnP AV servers, and DLNA support, the RT-N66U makes sharing and networking easier with two built-in USB ports. Download HTTP, FTP, and P2P files to a router-connected USB storage device all day without the need of PC. Additionally, the twin USB ports allow network printer and file server connections, so you perform multiple tasks at once.

Download and Stream From Anywhere

Download Master and DLNA server lets you download and play multimedia files stored on a router-attached USB storage

device on DLNA-compatible devices such as PC, tablet, PS3, XBOX, and Internet TV. Download Master can also download files while a PC is turned off, and allows you to manage and monitor download status remotely.

Powerful Online Multitasking up to 300,000 Data Sessions

Support for a massive data pipeline of up to 300,000 data sessions means the RT-N66U has around 20 times the networking capacity of other conventional routers for exceptionally smooth performance.

Separate and Secure Wi-Fi Network via Guest Network Access

The RT-N66U supports up to three wireless networks over the 2.4 GHz band and three over the 5 GHz band, so it can protect computers from any unauthorized access, hacking and virus attacks. The parental control allows you to set up your kids' computer access times.

VPN Server Enabled

Easily set up a VPN server to surf the Web and access data—no matter where you are. Featuring MPPE encryption, your data transmission will be secure and confidential.

Flexible Installation with Versatile Design

Wall-mountable, the RT-N66U fits nearly any space in the home or office.
